AMENDMENTS TO THE SPECIFICATION:

On page 11, line 18, please amend the paragraph as follows:

The input voltage of 2.5V charges the lower capacitor C_{p1a} to 2.5V through transistor N_{1a} p_{1a} which is turned on. The upper capacitor C_{p1b} is charged with 2.5V across it and presents 7.5V to the output. Charge is pumped to the output through transistor P_{1b} to maintain the output at this voltage.
